

The Flightcase Warehouse has been at the heart of the flight case industry for over 20 years and has grown to become one of the UK's leading manufacturers of flight cases for a range of applications and industries. Working out of a 35,000 sq ft facility in Tamworth in the heart of the Midlands is a team of trained, dedicated staff who understand the needs of customers. Whether the requirement is 1 case or 1000 cases the same work ethic and principles apply.

Cad designed Flight cases

Custom CNC Foam Inserts

FCW have the ability to manufacture foam inserts to any design that is required. Designs are created using the latest CAD design program and routed using a CNC machine. A hot melt adhesive system provides a perfect finish every time. Several foam types are available, depending on the requirement.

Our clients have relied on us over the years to come up with solutions to their packaging shipping and protection problems. Recent investment into Penn Elcom Case Designer software has enabled FCW to continue to raise quality and standards in the design of case solutions.

Manufacturing

All our flight cases are manufactured using the best materials available. Most cases are constructed using birch plywood with a black patterned rhino grip finish. However, we also offer high pressure laminates in a range of colours, stucco aluminium and lightweight astroboard. All panels are available in 7mm, 9mm and 12mm configurations. Other materials are available on request.

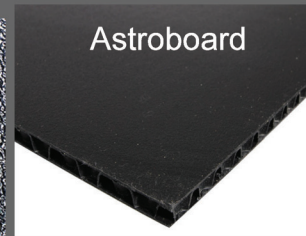

Rhino Grip

HPI Laminates

Stucco Aluminium

Astroboard

A selection of industries supplied by FCW include; music & film, audio-visual, motorsport, automotive, aerospace, manufacturing, military, sport, telecommunications, retail & medical.

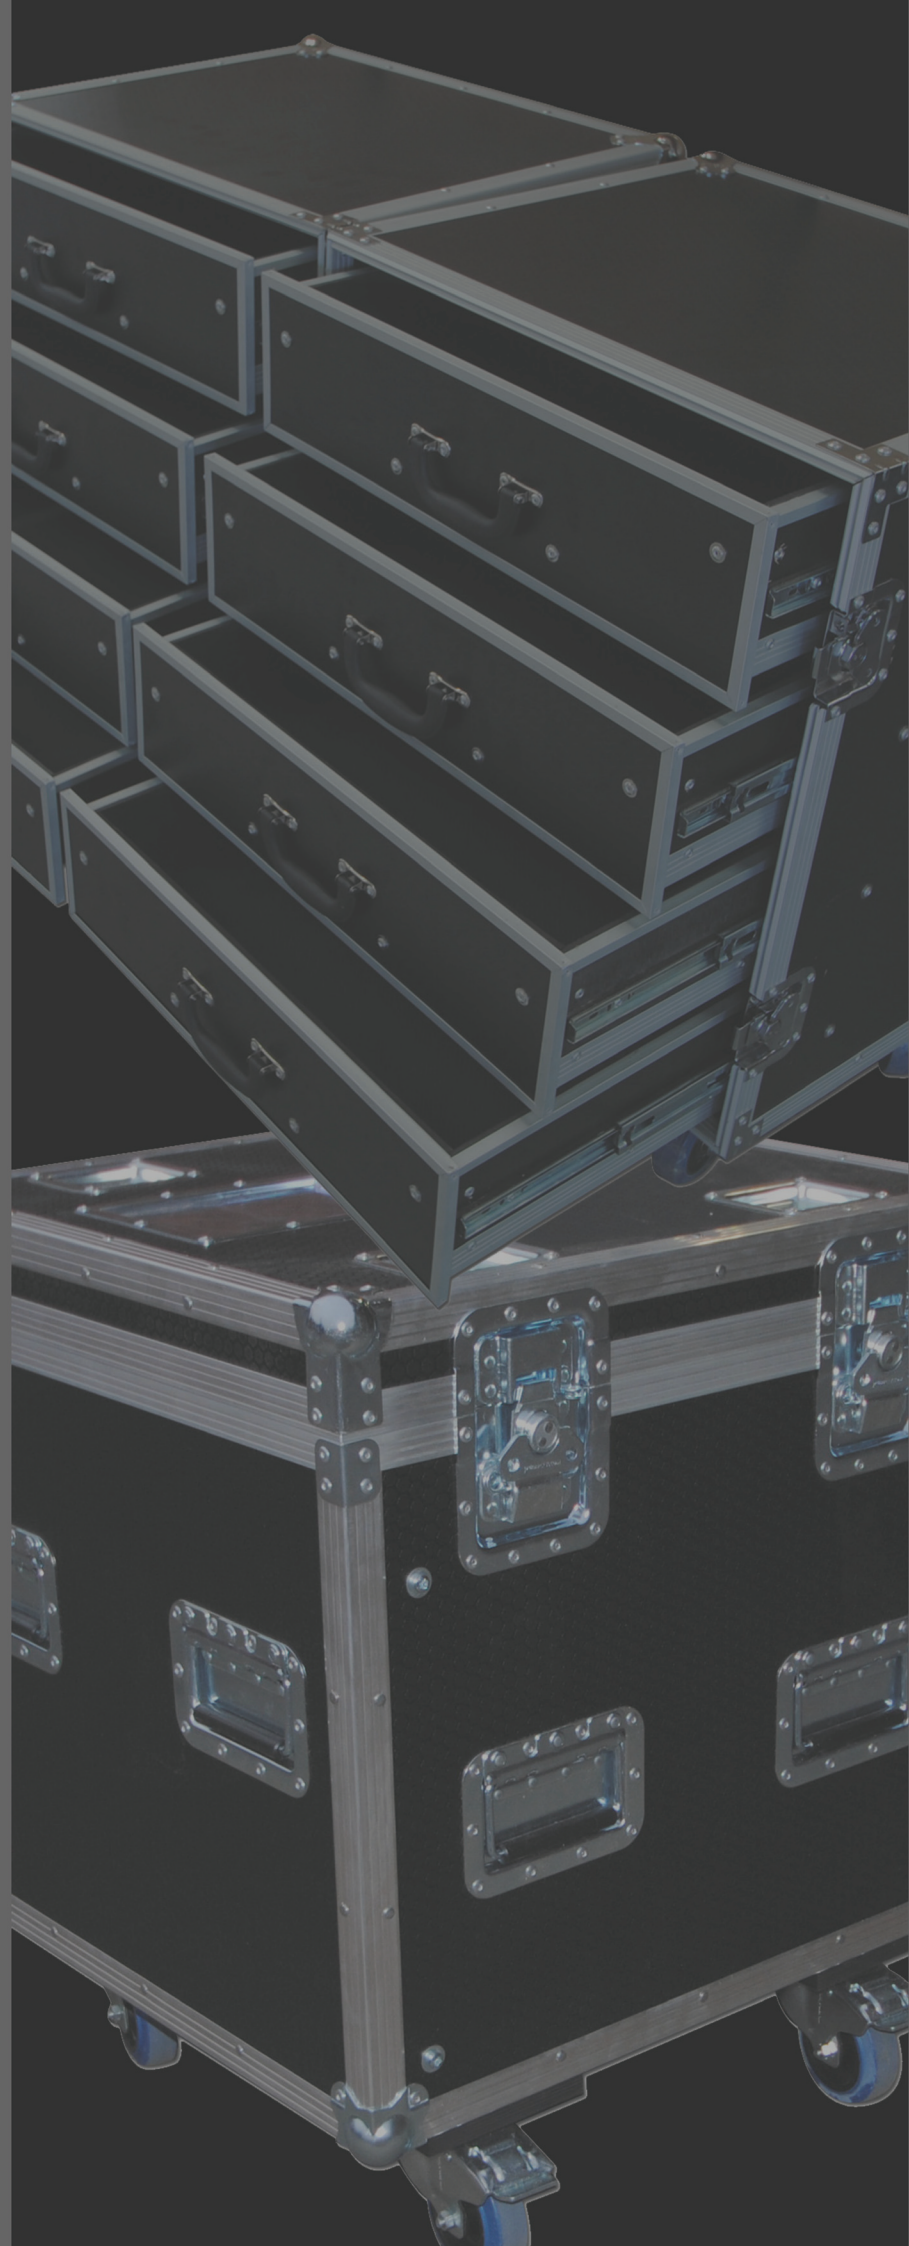

Our modern premises are equipped with the latest machinery and technology to ensure good quality flight cases are produced on time and within budget.
